

1. Install python 3.11

```
• (huang) (base) m11178@ceng-1-91zpy24:~/Desktop$ python --version
Python 3.11.11
```

2. Create a folder for your class files, make a python virtual environment called `venv` in this folder, activate it.

```
• (huang) (base) m11178@ceng-1-91zpy24:~/Desktop$ cd huang/
• (huang) (base) m11178@ceng-1-91zpy24:~/Desktop/huang$ source venv/bin/activate
• (venv) (huang) (base) m11178@ceng-1-91zpy24:~/Desktop/huang$ python --version
Python 3.11.11
```

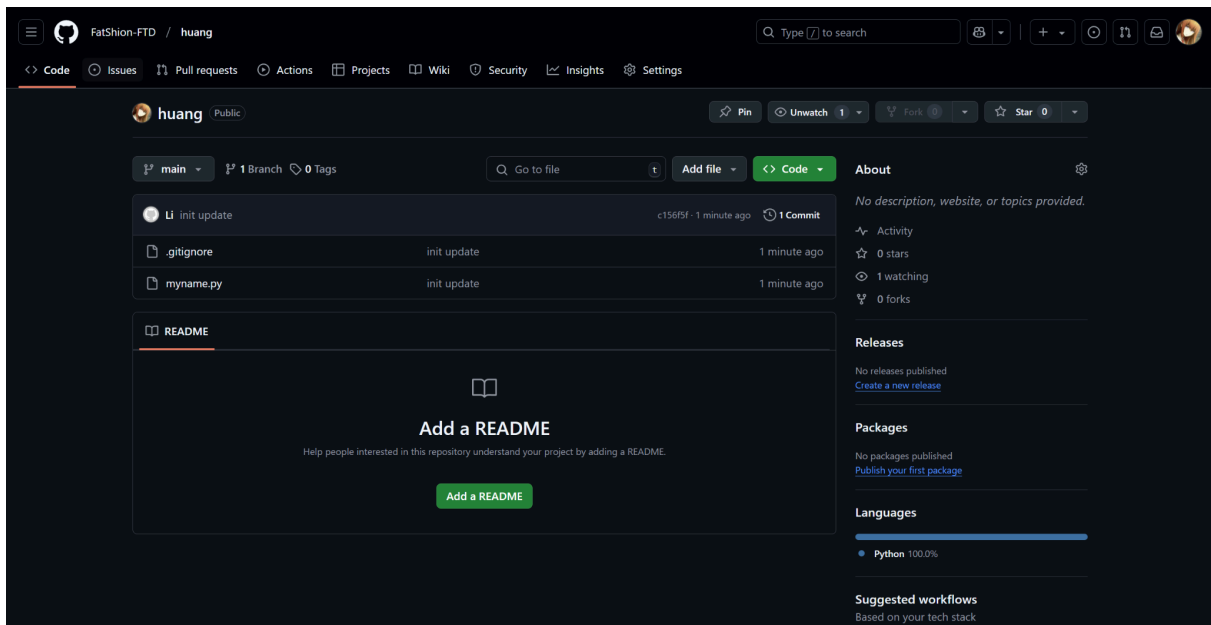

3. Create a notebook called *My First Notebook*, execute a print statement to print your name.

4. Pick one other IDE from this (I like VS code) and create a python script that prints your name, run it.

```
• (venv) (huang) (base) m11178@ceng-1-91zpy24:~/Desktop/huang$ python myname.py
Mingchen Li
```

5. SETTING UP GIT
